Theory of Space and Time Magnetic Relationship

This paper contains notes related to own perception of outer space physical properties related to the rules of the physics of the universe, mass, energy, light especially corresponding to black holes and travel through outer space.

NOTES:

1. In theory an empty un uncompressed space has a constant polarity that if disrupted will cause the empty space to become unparallel to rest of empty space that cause redirection of unmaterialized space-time magnetic energy to gravity-like routes that concentrate its unmaterialized that later materialize and forms light, energy and heavy mass that form stars of galaxies. Nothing inside the space is perfectly squared and parallel except theoretically time so empty space that follows only the rules of sums and vectors will magnetically cause any potential, light, energy, mass no matter what amount and distance to interact as all matter interacts under the rules of gravity.

2. Earth's polar magnetic field is currently circulating from the north pole to the south pole so, I theories that the expanding universe will eventually circulate back like the planets magnetic field or the galaxies motions and velocities will begin to act on each other causing a change of the expansion direction to contraction. The vast empty space of the universe magnetic polar properties (as theorized here) must eventually begin to contract or the change the direction of the universe.

3. Visible Light travels from the sun in all directions because the light wave is magnetic in nature, meaning each one light wave is of opposite magnetic direction that allow non-parallel to each other light waves to repel each other like the magnets repel from each other when the poles are

not aligned properly. The sunlight due to that effect keeps shining in all directions no matter how weak or strong from its source to any outer space.

4. Combining different lights with different wavelengths is also worth noticing, for example red with green and blue, can coexist and combine each other's paths in same space and form stronger visible light together a white light. Similarly, UV A, B, and C light waves when combined form a full UV spectrum that is very dangerous for biological organisms, but useful for calibrations of various technology instruments and sensors.

5. A light wave momentum known as the radiation pressure can serve as a prove that light wave is subdued to similar rules that exist for the motion of mass, but in its on category that applies to the light waves and light particles. According to the definition of the radiation pressure, occurrence arises from the exchange of the momentum between electromagnetic waves (or photons) and matter. When light or other electromagnetic radiation strikes a surface, it transfers momentum to that surface. If the radiation is absorbed, the pressure is proportional to the energy density of the wave. If the radiation is reflected, the pressure is doubled because the momentum change is twice as large.

6. Black Holes in my opinion are an object in outer space that are of opposite to space in terms of magnetic direction and are present where the magnetic field mass surrounding the black hole like stars and galaxies allows the outer space to form a black holes by complex type of condensing of space magnetic potential under pressure of dead stars. Black holes possibly begin life by condensing infinitely what cannot form matter. The black hole exists most likely because the magnetic force and field surrounding the black hole prevents the black hole from escaping its inward magnetic potentical condensing. View picture on the last page for more recent notes.

FINDINGS

7. MAGNETIC FIELD PROPERTY OF LIGHT WAVE AND SPACE (MAGNETIC PROPERTIES TO BE PROVEN) CAN BE APPLIED TO ENGINEER A MAGNETIC PROPULSION THAT ALLOWS MOTION THRU:

a. **HIGH FREQUENCY MAGNETIC FIELD PROPULSION** that thru perpendicularity of repelling magnetic force of light and space allow the propulsion to move its position in space. Frequency of magnetic field vibration in light waves is 4x10^14 to 7.5x10^14 which is 400THz to 750Thz of 400nm -750nm wavelength. The field that pushed object in space via parallel-perpendicular to light wave force of outer space would have to be of same frequency;

b. **EXTREMLY HIGH FREQUENCY MAGNETIC FIELD PROPULSION** That thru perpendicularity of repelling magnetic force of light and space allow the propulsion to move its position in space. Frequency of magnetic field vibration that pushed object in space parallel-perpendicular to light of outer space would have to be of greater than light frequency >10^14 (eg. Gamma rays) to move in space from space related magnetic motion activating frequencies.

The rules of magnetic field circulation in and around the waves of light should be studied to provide abilities to design experiments that can use found properties for the design of light waves or greater frequency magnetic propulsion. Kind regards.

OUTTER SPACE
INFINITLY EXPANDS MAGNETIC POTENTIAL.
TOO WEAK MFM AND MAGNETIC POTENTIAL FALLS TO DECAY RADIATION.
LIGHT
e⁻
p+
n°
A CORRECT MFM AND ANY MAGNETIC POTENTIAL BECOMES A MASS (L, e⁻, p+, n°)
3 STAR THAT GOES INTO DECEY.
2 STAR LIFE EXPLODES (SUPERNOVA)
1 STAR LIFE BEGINS
2 STAR LIFE EXPLODES (SUPERNOVA)
3 STAR - THAT BECAME A BLACK HOLE CAUSED DID NOT STOP ON MATTER FORMING MOMENTUM
MATTER FORMING MOMENTUM
A OUTTER SPACE (O) IS EXACTLY THE OPPOSITE OF INNER BLACK HOLE (∞) THAT INFINITLY CONTRACTS ALL MAGNETIC POTENTIAL, OUTTER SPACE INFINITLY EXPANDS ALL MAGNETIC POTENTIAL THAT IS OUTSIDE OF MATTER FORMING MOMENTUM.
TOO STRONG MFM AND STAR BECOMES A BLACK HOLE
ALL BLACK HOLES.
INFINITLY CONDENSING MAGNETIC POTENTIAL
